Profile subjects of the study program based on the description of field of study 2 *Safety and Security Sciences* are highlighted in bold

Paths in education:

The student has the opportunity (not the obligation) to choose a path/trajectory in education - profiling when creating study plans. Using knowledge from compulsory and compulsory elective subjects, he develops his creative and practical skills in selected subjects:

- Integral safety in air transport – the student's profiling focuses on the following areas of knowledge:
  - basic knowledge of operational procedures and standards in international aviation,
  - basic knowledge of air transport technologies,
  - knowledge of object and perimeter security systems used in airport operations,
  - regime and management procedures for the safe operation of airports,
  - security technologies for the inspection of persons and objects,
  - knowledge of the operation of border crossings in the Schengen area.

- Security of financial operations and corruption – the student's profiling focuses on the following areas of knowledge:
  - business basics,
  - basics of economics and economy,
  - ways of protecting economic interests,
  - economic security risks,
  - revealing and clarifying illegal economic activity,
  - offensive and defensive competitive intelligence,
  - fight against corruption.

- Environmental security – the student's profiling focuses on the following areas of knowledge and skills:
  - basic knowledge and overview of legislation related to the environment,
  - theoretical knowledge of environmental issues and related concepts,
  - knowledge in the field of pollution, degradation and protection of individual components of the environment,
  - knowledge in the field of environmental safety and environmental crimes,
  - knowledge in the field of environmental management - voluntary instruments (environmental policy, environmental management systems), environmental impact assessment, environmental labeling of products, organizations' approaches to the environment, etc.
  - basic knowledge of environmental risks, industrial accidents, natural disasters, hazardous substances,
  - basics of fire protection.

- Cyber security – the student's profiling focuses on the following areas of knowledge:
  - basic knowledge and overview of standards in the field of IT security (e.g. ISO 27001 – Information Security Management Systems, Data Security Standard),
  - basic overview of legislation (GDPR, Act on the Protection of Classified Information, Act on Information Technologies in Public Administration, Act on Electronic Signature, Act on Cybersecurity),
  - technical knowledge in the field of ICT and networking,
  - technical knowledge in the field of security (basics of cryptography, basic knowledge of attack techniques, virus protection and content filtering, basics of vulnerability management).

- Security in transport and transport infrastructure – the student's profiling focuses on the following areas of knowledge:
  - transport and transport infrastructure,
  - transport and transport protection,
  - revealing and clarifying illegal activity in transport,
  - traffic-engineering activities in the area of police activity,
  - critical infrastructure of the state – transport sector,
  - safety technologies for the protection of people and property in transport.

- Special pedagogy for security sciences – the student's profiling focuses on the following areas of knowledge:
  - tools of special pedagogy applicable in security forces,
  - approach and procedures in resocialization processes (ZVJS),
  - sociology and psychology in security processes,
  - training of security workers in the field of soft skills,
  - ethics of security services.

Study in profiling is mostly oriented towards thematic creative activity of the student, while it includes:

- work in small groups under the guidance of the head of profiling in selected subjects (elective profiling subject in the 2nd semester, semestral project, professional practice, final thesis),
- according to the profile, a themed final thesis corresponding to the study program, field of study and degree of study,

For profiled studies, the student uses:

1. knowledge from compulsory subjects, the content and focus of which are directly related to the chosen profile and develops them in creative activity,
2. transferable knowledge, skills and competences acquired in the compulsory subjects of the bachelor's study program,
3. other training, certifications and qualifications that are related to profiling and are offered by the school or its partners as further education in the field of study. Learning outcomes achieved outside the university in domestic and foreign institutions are recognized by the university if their content is directly related to the educational activity in the subject of profiling and valid certification is generally accepted as the fulfillment of one of the learning outcomes (up to the credit level). The rules for this procedure are defined in the information sheet of a specific subject in the section "Conditions for completing the subject".
4. Recognition of micro-credentials and short study programs.

State final exam

8311253	**Information Security and Cybersecurity in Healthcare**	4		Commission
8311254	**Safety in Social Work**	4		Commission
	In sum	**12**		

Note: The student chooses only one of the compulsory elective subjects of the state exam.

State examination (1st degree of higher education):

- Defense of the bachelor's thesis (abstract in English) in the range of 40–50 A4 pages, in which the graduate must demonstrate the ability to apply the acquired theoretical knowledge, skills and competences in solving practical problems of a security nature and solve them independently.
- The ability to solve assignments based on the expected application of the graduate is verified.
- The colloquial exam is used to verify the fulfillment of educational goals by acquiring and understanding the required knowledge, skills and competencies of the graduate, which were individually mastered in the form of learning outcomes during the course of study.

Other requirements:

- **The learning outcomes (**also marked as **"LO") and the related criteria and rules for their assessment** are listed in the individual subject information sheets in the "Learning outcomes" section and in the "Conditions for completing the subject" section.
- **Pre-requisites and co-requisites** are listed in the subject information sheets**.**
- **The educational activities used,** suitable for achieving the learning outcomes, are listed in the subject information sheets in the section "Conditions for completing the subject" for each learning outcome separately.
- **The method of education is:**
  - attendance,
  - distance,
  - combined.

  Technical means for online teaching (MS Teams and Moodle) are also used for individual education methods.
- **Syllabi** are available in the Moodle system (https://moodle.vsbm.sk).
- **The student's workload is defined in the so-called Subject plans for individual subjects separately. The workload depends** on the number of credits and is budgeted for lectures, seminars, projects, and independent study in order to fulfill ECTS rules (EHEA).
- **Credits** are assigned to each subject separately. The share of profile subjects is as follows:

Profile subjects of the study program in sum	126 credits
Other subjects of the study program in sum	88 credits
In sum	214 credits
Coverage of the core of the field of study by profile subjects of the study program	58,87 %
